

CDC Achieving Greater Health Impact

Goals for the 21st Century

Tell the Centers for Disease Control and Prevention What Health Objectives are Most Important to Your Community

The Centers for Disease Control and Prevention (CDC) has established Health Protection Goals to guide its work in addressing both on-going public health needs as well as new and emerging challenges to health and safety.

The Arkansas Department of Health and Human Services and the Fay W. Boozman College of Public Health at the University of Arkansas for Medical Sciences are hosting a meeting on behalf of the CDC to gain insights from our community on CDC's national health protection goals and their objectives.

This is a unique opportunity for you as a member of the public, to provide input on how CDC should prioritize its objectives to reflect the issues important to you and your community. This is also an opportunity for you to learn more about CDC and its efforts with your local agency to protect the health and safety of you and your community.
